

Aquaknight Industries Limited

Membrane Drainage Maintenance Recommendations

Aquaknight Industries Limited supplies a range of Stormwater outlets that may contain any of the following:

- Stainless Steel
- PVC plastic
- ASA plastic
- Brass

All exterior products require periodic maintenance to ensure they will function correctly.

Aquaknight recommends that all gutters, and in particular the area around the outlet/s be checked and cleared of debris at least every two months, and after every significant storm.

All exterior products require a periodic maintenance to maintain their appearance.

Aquaknight recommends that all surfaces be cleared of any residual build-up. If required, mild detergent can be used to dissolve the accumulations that occur over time.

'Tea Staining' is a normal feature of all stainless steel.

This does not affect the structural integrity and will not affect the performance or longevity of the products.
